Quiz Results

You correctly answered **5 of 5** quiz questions.

Question 1

Question	A researcher wants to observe preschoolers at a local public playground to evaluate levels of cooperation. The researcher will not interact with the children or record information in such a manner that the identity of the subjects can be readily ascertained. Which of the following statements is true?
Your Answer	This research would be eligible for exemption because the researcher is not interacting with the children and the playground is a public setting.
Result	Correct
Comment	The exemption categories that may be used with children include observations of children in public settings, as long as the researcher does not participate in the activities being observed or record information in such a manner that the identity of the subjects can be readily ascertained. Research does not require full committee review

when it involves children, unless it does not fall into an exempt or expedited category.

Question 2

Question	According to Subpart D, research with children may be eligible for exemption under Category 2 when:
Your Answer	The research involves the use of educational tests
Result	Correct
Comment	Subpart D restricts the use of exemptions when children are research subjects. Research that involves interviews, surveys, or participant observation when the researcher interacts with the children is not eligible for exemption under Category 2.

Question 3

Question	A researcher asks an IRB to waive the requirement for parental permission for a study conducted in schools because the nature of the research requires participation of all the children present in classrooms on the day the research will take place. Assuming that the basic research design could be approved by the IRB and the school, which of the following requirements must be met before an IRB could waive parental permission?
Your Answer	The research must pose no more than minimal risk.
Result	Correct
Comment	One of the four criteria for waiving parental permission is that the research must pose no more than minimal risk. Although it may be appropriate to notify parents that the study is taking place, and many researchers do so, it is not required by the regulations when a waiver of parental permission has been approved. While children must provide assent to participate, depending upon the age of the children there are multiple strategies for accommodating children who do not want to participate other than alternate classroom

activities. It is not required that an independent consultant approve waivers of parental permission.

Question 4

Question	According to federal regulations, “children” are defined as:
Your Answer	Persons who have not yet attained the legal age of consent under the applicable laws in the jurisdiction in which the research will be conducted.
Result	Correct
Comment	According to the federal regulations, children are persons who have not yet attained the legal age of consent under the applicable laws in the jurisdiction in which the research will be conducted. Generally, though not always, the age of consent is the age at which minors reach the age of majority and are considered adults. In the United States, state law dictates the age of majority. In most states, the age of majority is 18. This means that a 17-year-old may be considered a child when applying the federal regulations for protecting research subjects.

Question 5

Question	The specific U.S. Department of Health and Human Services (HHS) regulations that apply to research with children are known as Subpart D: Additional Protections for Children Involved as Subjects in Research.
Your Answer	True
Result	Correct
Comment	The provisions of Subpart D, of the HHS regulations, Additional Protections for Children Involved as Subjects in Research are the specific U.S. Department of Health and Human Services (HHS) regulations that apply to research with children.
